14	1.62	2.16	2.43	2.70	2.97	3.24	3.78	4.32
Maximum Recommended Pressure (RBP)	16	1.65	2.20	2.48	2.75	3.03	3.85	4.40*
18	1.68	2.24	2.52	2.80	3.08	3.36	3.92	4.48

*Except for the following Zonda 4.0-25mm, 4.0-30mm, 4.0-35mm and 4.0-40mm whose maximum recommended pressure is 14 Bars.

ZONDA Paclitaxel Eluting PTCA Dilatation Catheter

- Usable length: 140cm
- Proximal shaft diameter: 1.7F (0.58mm)
- Distal shaft diameter: 2.3F (0.78mm) for Ø1.5 & 2.25mm
2.6F (0.86mm) for Ø2.5 & 3.5mm
2.8F (0.95mm) for Ø4.0 mm
- Minimum guiding catheter diameter: 5F for Ø1.5-3mm
6F for Ø3.5-4mm
7F for Ø4.0-30, Ø4.0-35, Ø4.0-40
- Maximum guide wire diameter: 0.014" (0.356mm)
- Radio-opaque marker bands: 2 of 0.75mm
- Nominal Pressure: 6 bars
- Rated Burst Pressure: 16 bars
- Balloon material: Semi-compliant polyamide
- Folding: Ø1.5 - 2 Folds
Ø2.0-3.0 - 3 Folds
Ø3.5-4.0 - 4 Folds
- Drug: Paclitaxel
- Dosage: 2.5µg/mm²
- Excipient: BTHC Butyryl-tri hexyl Citrate

ZONDA

Zonda Paclitaxel eluting PTCA dilatation catheter is a brand-new challenger in the fast growing era of Drug Eluting Balloons (DEB). The combination of a polymer free technology and the proven antiproliferative molecule paclitaxel provides a new elegant therapeutic tool allowing to treat complex indications without leaving any metal inside or long lasting drug loaded polymer allowing therefore a significant patient benefit.

Drug Delivery Technology

- A matrix made of Paclitaxel molecules combined with a biocompatible drug carrier excipient (BTHC) enables optimal drug transfer across the vessel wall.
- Polymer free technology ensuring delivery of at least 75% of the drug at the lesion site.

Paclitaxel

- Highly lipophilic drug promoting a rapid cellular uptake by enabling it to easily pass through the hydrophobic barrier of cell membranes.
- Efficacy and safety proven as a useful long-lasting anti-proliferative treatment in coronary arteries even after a brief, single-dose application at very low concentrations.
- Mechanism of action interfering with SMC proliferation and migration at nano-molar levels and preventing neointimal SMC accumulation.
- 2.5µg/mm² dosage fully bioavailable on the surface of the balloon.

Elution Time

- Maximized drug efficacy as 100% of the balloon surface is coated with Paclitaxel.
- Optimal drug transfer occurs within a 30-second balloon inflation time.

ZONDA Indications

- De Novo or restenotic coronary segments
- Small vessels
- Bifurcation
- Bypass
